Introducing The Next Generation 'B' Type Power & Lighting Boards

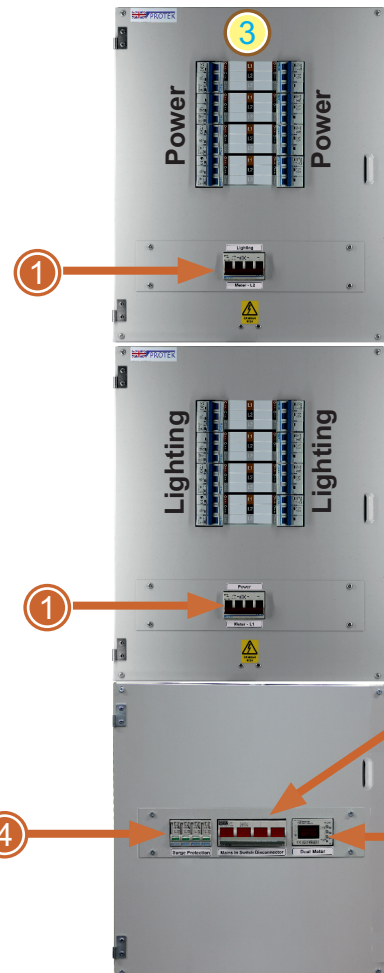

PROTEK has launched its next generation Power and Lighting Electrical Distribution Boards. The following shows THREE different configurations giving total flexibility for installation.

Features

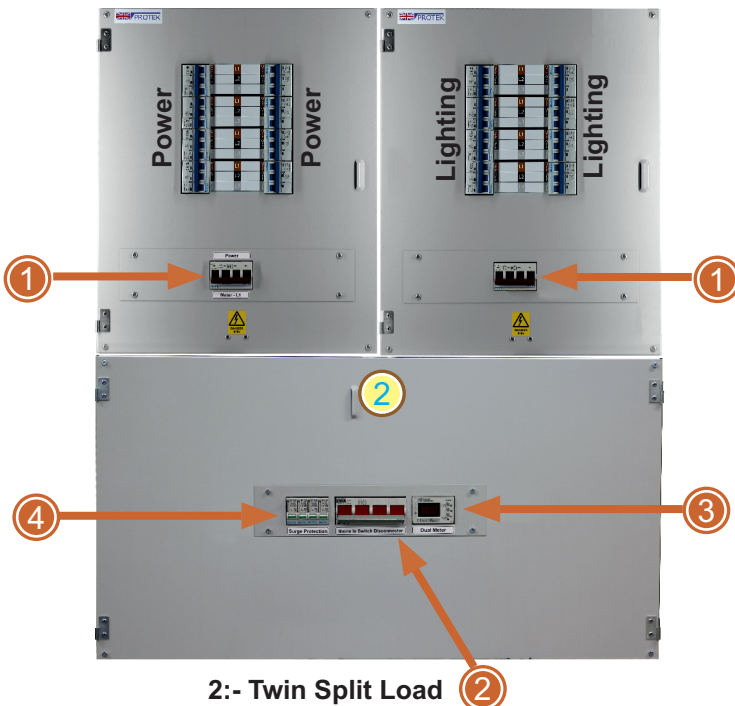

- ① All three styles come fitted as standard with two dedicated Switch Disconnectors; one for each of the circuits, allowing total control over individual isolation.
- ② All boards fitted as standard with a 250A mains incomer switch disconnecter.
- ③ All boards have dedicated meter readings for both Power and Lighting circuits. Data can be easily accessed from the Dual Meter fitted as Standard.
- ④ An ever increasing requirement for surge protection has led PROTEK to fit Type 2 Surge Protection Units as standard across all three configurations.

1:- Compact Split Load

3 :- Group Stack Split Load

2:- Twin Split Load

PROTEK Power and Lighting Distribution Boards deliver a flexible, reliable, and high quality electrical distribution solution for any installation, no matter what the confines are.
